Passionate About

iOS & AI

I believe learning never stops. Every project, every challenge, and every new technology helps us become better developers.

How AI is Changing Mobile App Development

AI is transforming both **mobile applications** and **developer workflows**. In this talk, we'll explore what AI is, why it became so popular, how it's already everywhere – and what you'll take away today.

Mobile Apps: Before AI vs Today

AI transformed user experience – from static and one-size-fits-all to dynamic and personal.

Before AI

- Static UI
- Keyword Search
- Rule-Based Logic
- Manual Support
- Same Experience for Everyone

With AI

- Personalised UI
- Smart Search
- Learns from Data
- AI Chatbots
- Personalised Experience

AI is Already Part of Our Daily Life

Every app you use is powered by AI behind the scenes.

Google Maps

Spotify

Instagram

Amazon

Netflix

Apple Photos

ChatGPT

AI Features in Mobile Apps

Personalised Recommendations
Spotify, Instagram

Voice Assistant
Siri

Image Recognition
Google Lens, Apple Photos

Language Translation

AI Chatbot
ChatGPT

Predictive Analytics

Content Generation

AI Changed How Developers Work

Before → After

Google → ChatGPT

Stack Overflow → AI Assistant

Documentation → AI Summary

Manual Testing → AI Testing

Boilerplate Code → AI Generation

AI Tools in My Workflow

- **ChatGPT** – quick answers & explanations
- **Copilot** – inline code suggestions
- **Cursor** – AI-powered IDE
- **Claude** – deep reasoning & code review
- **Gemini** – Google's multimodal AI

AI removes repetitive work – not developers. When I first started building iOS apps, AI became my teammate.

Apple Intelligence

Writing Tools

Genmoji

Image Playground

Visual Intelligence

Smarter Siri

Private Cloud Compute

Apple's approach centres on **on-device AI** and **privacy** – keeping your data local while delivering powerful intelligence across the Apple ecosystem. This is the future of iOS.

Challenges & The Future of AI

⚠ Challenges

- Privacy
- Bias
- Hallucinations
- Ethics

🤖 What's Coming

- AI Agents
- On-Device AI
- Voice First
- Smarter Apps

Key Takeaways

AI is changing mobile development.

AI creates better user experiences.

1

2

3

4

AI improves developer productivity.

Learn AI — it's the future.

Will AI Replace Developers?

No. AI is a tool — it helps us write code faster and learn faster. But AI doesn't understand business requirements, communicate with clients, or make architectural decisions.

 **Developers who know how to use AI will replace developers who don't.**

Thank You! 🌟

Keep Learning. Keep Building. Keep Innovating.
